Passive houses

- Basic Principles of the Passive House
- Projects from Austria from Treberspurg & Partner Architects ZT GmbH
- The Design of the Austria House

Principles of the Passive House Concept

Definition (Passivhouse Institute Darmstadt - Dr. Feist):

A Passive House is a building, for which thermal comfort can be achieved solely by postheating or postcooling of the fresh air mass, which is required to fulfill sufficient indoor air quality conditions - without a need for recirculated air.

- ▶ Optimizing the building shell
- ▶ Loss minimizing before Profit Maximizing

Comparison of PH with conventional buildings

Net final energy for space heating and hot water

Conventional House VS Passive House

Building Standard

Quellen: R. Ploss

Passive House:

Quellen: R. Ploss

$$\text{Losses} - \text{Gains} = \text{Heating energy requirement}$$

[source: HdZ - Passivhaus Schulungsunterlagen, 1.3 Ressourcenverbrauch im Gebäudebetrieb]

Energy Saving!

Energy saved on heating is 86% compared to conventional standards of new buildings.

[source: CEPHEUS]

Definition of kWh

- ◆ 1l heating oil \approx 10 kWh
- ◆ 1l gas \approx 7 kWh

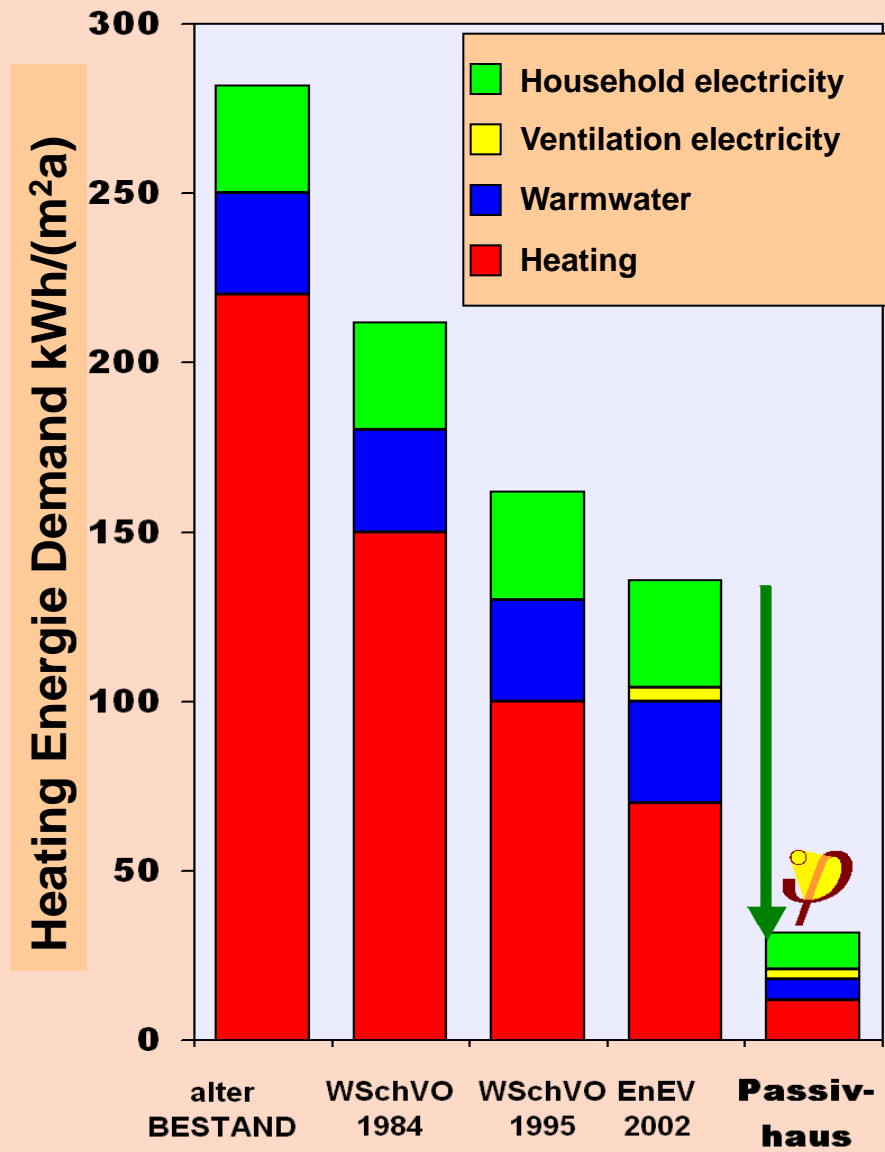

Definition of kWh

- ◆ **Conventional house** before year 1990
-> 200 kWh / m²a
- ◆ 100 m² -> 20 000 kWh -> 2000 liter oil
- ◆ **Passive house** -> max 15 kWh /m²a
- ◆ 100 m² -> 1500 kWh -> 150 liter oil

	before	after
HWB (in kWh/m²WNFI./a):	175	15
Oil/l/a:	38.210	3.536
Oil savings in l:		34.674

Factor **10**
is
possible

Evolution

„1-Liter Car“

Over 80% Energy savings

„1-Liter House“ = Passivhaus:

Since 1991

Over 90% Energy savings

Principles of the Passive House Concept

Passive Houses require superior design and components with respect to:

- ◆ Insulation
- ◆ Comfort windows
- ◆ Design without thermal bridges
- ◆ Air-tightness
- ◆ Ventilation with heat-recovery
- ◆ Innovative heating technology

Building Envelope: High Thermal Insulation

[source: Passivhaus Institut]

Building Envelope: Comfort Windows

Example of triple pane glazing window

Window $\leq 0,8 \text{ W}/(\text{m}^2\text{K})$ (R-7.1)

Building Envelope: Comfort Windows

Passive House Window, Interior

Infrared pictures of an old building and a passive house (at the bottom) for comparison (photos: PHI)

Building Envelope: Avoiding Thermal Bridges

Building Envelope: Airtight Construction

An envelope can be airtight only if it consists of ONE undisturbed airtight layer enwrapping the whole volume.

[source: Passivhaus Institut]

Building Envelope: Airtight Construction

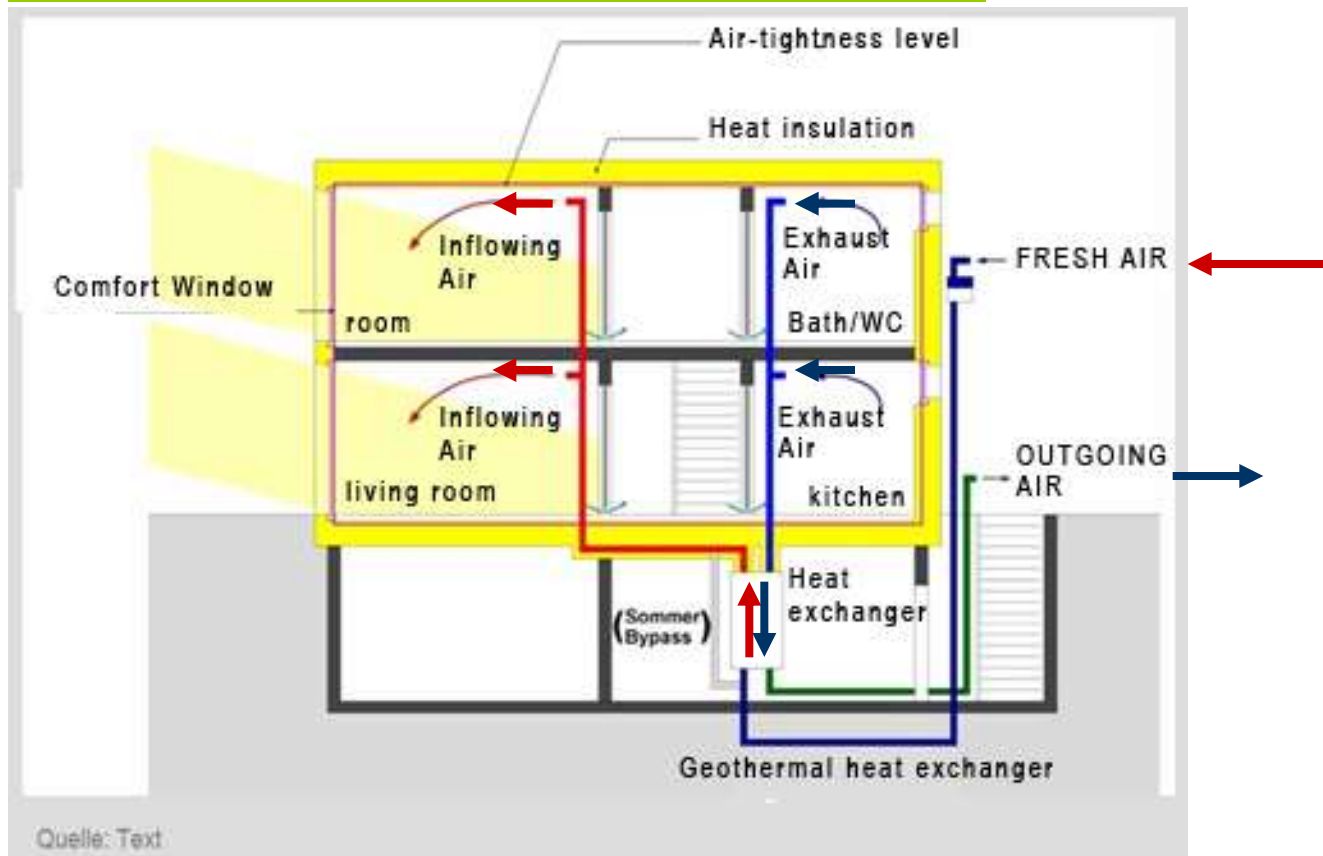

Quelle: Energie und Umweltzentrum (EUZ)

Quelle: Passivhaus Institut Darmstadt

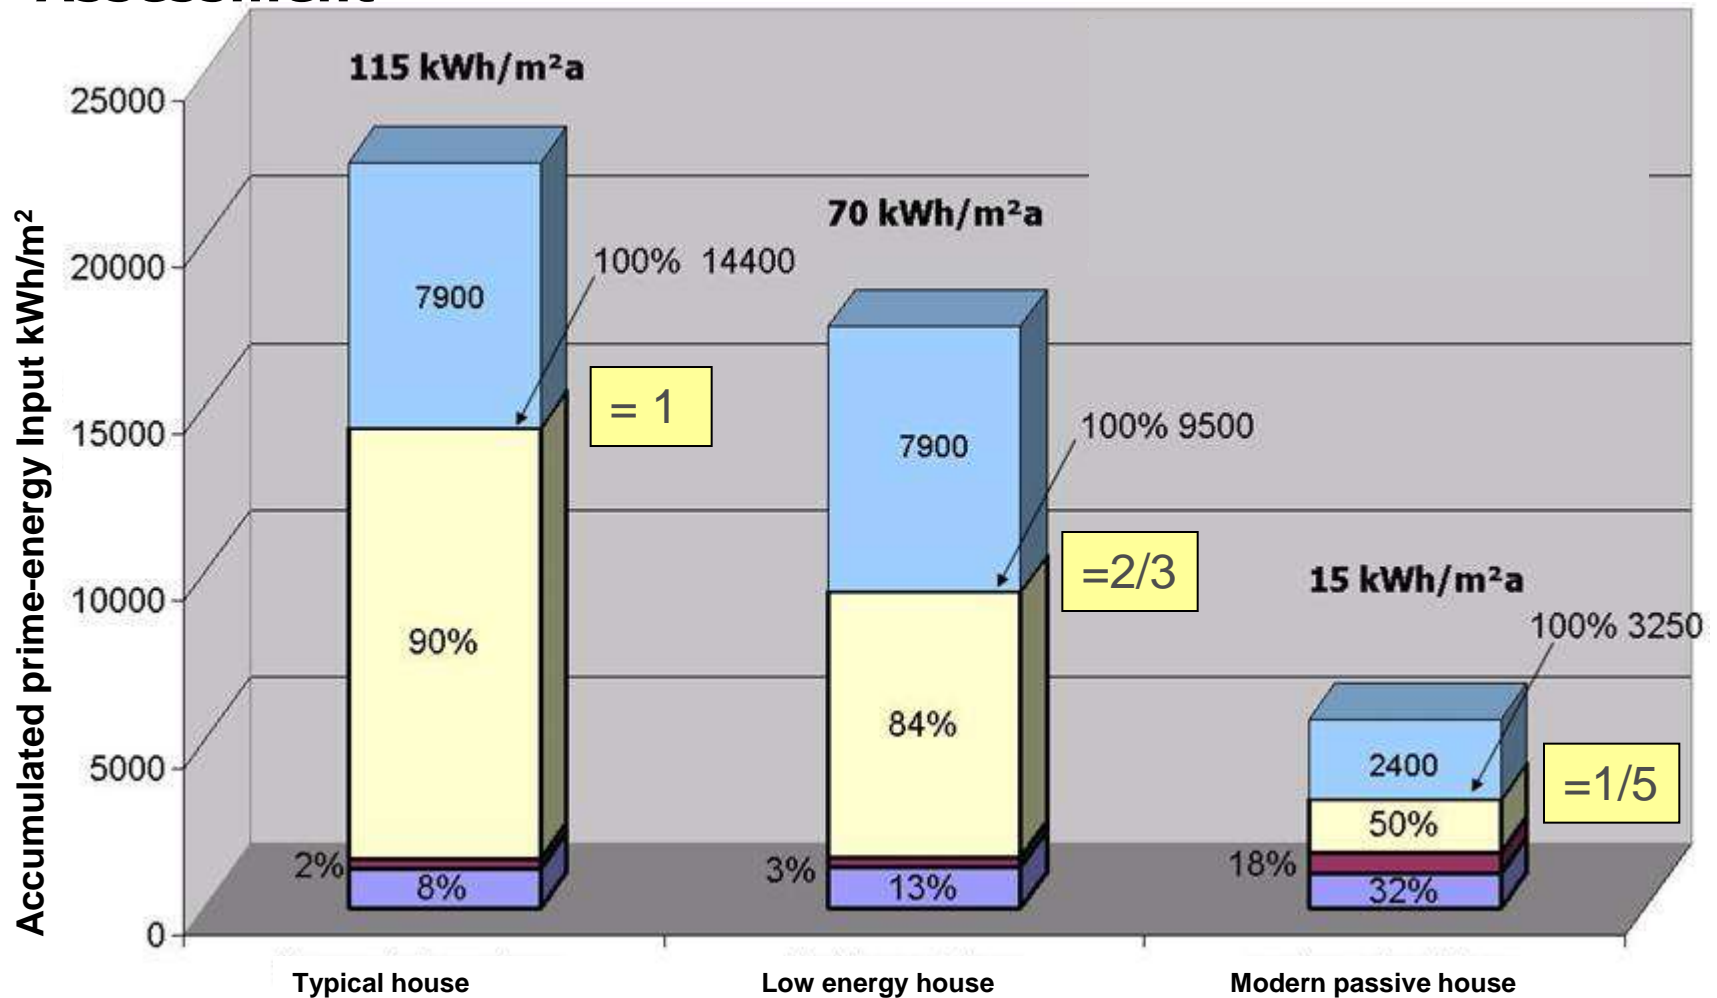

- ◆ avoid damage caused by condensation of moist, room warm air penetrating the construction
- ◆ reduce losses through building envelope and ventilation

Innovative Heating Technology: Ventilation with heat recovery

[source: CEPHEUS]

Life Cycle Assessment

- Household electricity consumption 80 years accumulated
- Heating energy consumption 80 years accumulated (Gas)
- Prime-energy content demolition and disposal
- Prime-energy content new building

Energy standards

Use of energy standards:

Comparability of figures
(standardised classification)
through national implementation

Increase in market transparency
for renters, buyers and investors

Suggests recommended
improvement measures to property
owners

Assures quality to customers of
newly built houses and renovation
standards

Marketing-instrument for
residential and real estate sector

THERMAL REFURBISHMENT

THE DESIGN OF THE AUSTRIA HOUSE IN WHISTLER, CANADA

What´s the overvalue of the Olympic Austria House?

Symbol for Canada and the world, how the energy issue could be solved and how sustainable development could be realized

- ◆ Most energy efficient building in the Olympic history
- ◆ Ecological building materials
- ◆ Salubrious indoor climate: fresh air quality, natural light and other contributions to raise workplace productivity
- ◆ High quality of planning (coordinator Erich Reiner) and workmanship: Sohm Holzbau, Optiwin, drexel&weiss and others

BUILDING SERVICES CONCEPT

- decentralised ventilation compact system with PH- Compactinstruments Aeorsmart S of Drexel & Weiss in every apartment.
- air preheating through 11 geothermal sensors in 100 m depth, Solezwischenkreis and heat exchanger on the roof as fresh air-exhausts.
- A small electrical radiant heater in the bathroom, an electrical radiator, controlled by the compact instrument for peak demand
- Photovoltaic cells on the southern façade

BUILDING SERVICES CONCEPT

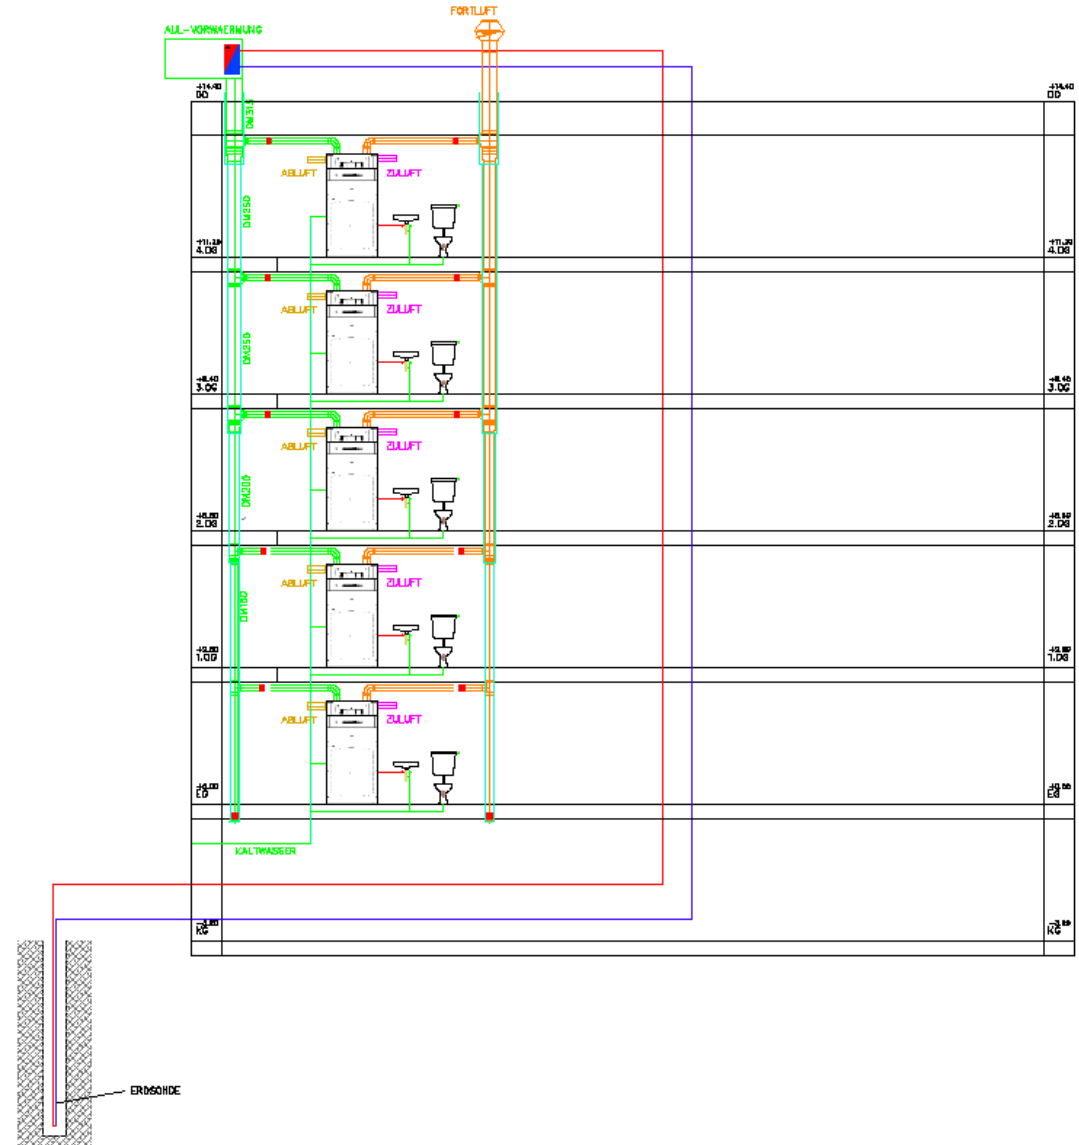

Ventilation facilities at the Roof

BUILDING SERVICES CONCEPT

Function ventilation

- Passivhouse ventilation through decentralised ventilation instruments in every apartment
- Air preheating through heat exchangers and geothermal energy sensors
- Warm water preparation decentralised due to hydro-extractors

BUILDING SERVICES CONCEPT

MULTI-RESIDENTIAL BUILDING

Brünner Straße 190, 1210 Vienna

OBJECT DATA

Type:	New building of Multi-family Houses
Constructor:	GESIBA, gemeinn. Siedlungs- und Bau AG
Planing:	Arge Architekten Reinberg - Treberspurg - Raith
Completed:	1996
Size:	23.380 m ²
Amount:	215 accommod. units, KIGA, pub, basement garage
Heating energy demand:	Line: 22 kWh/(m ² a), Houses: 35 kWh/(m ² a)
Netto Building Costs:	ca. 24 Mio. EURO

Focus: Forerunner of passive house concept: mechanical ventilation system with heat recovery in Line, district heating

An aerial photograph of a river valley. In the foreground, a large, curved solar panel array is visible on the right side. The middle ground shows a dense forest of green trees along the riverbank. In the background, a city is built on a hillside, with a river winding through the valley. The sky is blue with some clouds.

solarCity

**Linz City Expansion Project
1996-2005**

Location and Size

- Area of Linz City:
ca. 9.600 ha
- Area solarCity:
ca. 60 ha

Apartments: 1,298 apartments
Public transport: tram, bus

[credit: MAG Linz]

Solar City Linz Pichling

2003 FIRST PASSIVE HOUSE IN UPPER AUSTRIA!

Developer: EBS Wohnungsgesellschaft mbH Linz

Architects: Treberspurg & Partner Architects ZT GmbH

Premises for the Beginn

- ❑ 12.000 Accommodations needed in 1990
- ❑ City Expansion only in Pichling possible
- ❑ Idea of a „Solar City“

Solararchitecture

- ❑ Low energy construction method
- ❑ Partial passivehouse standard
- ❑ Min. heating energy Demands
- ❑ Compact style
- ❑ Very good Insulation
- ❑ Solar energy (passive/active)
- ❑ ecological. parts catalogue

Traffic

- Walk- and Bicycle lanes
- Tram connection
- Rapidbus
- by-pass Ebelsberg
- medium-term quick railwaybound public transport

Energy supply

- solar panels
- district heat

Disposal

- ❑ Pilotproject „Effluent free settlement “
- ❑ Grey water cleaning in Plant cleaning facilities
- ❑ Rainwater cultivation
